

Anti Age CAS 928006-88-6 Acetyl Tetrapeptide-11 White To Off-White Powder

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: HPLC
- Model Number: HBY-Acetyl Tetrapeptide-11
- Minimum Order Quantity: 1-500g
- Price: Negotiable
- Packaging Details: 1-500g /plastic bottle
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union, MoneyGram
- Supply Ability: 5000kg per month

Acetyl Tetrapeptide-11

Product Specification

- INCI Name: Acetyl Tetrapeptide-11
- Cas No.: 928006-88-6
- Recommended Use Level: 100-1000PPM
- Storage: Keep In Dark And Cool Dry Place (-5 To 8°C)
- Appearance: White To Off-white Powder
- Odor: Slightly Characteristic Odor
- Theoretical MW: 530.61
- Purity (HPLC): ≥95.0%
- Applications: Anti-age
- Function: Action On Dermal Structure Via Stimulation Of Lumican And Collagen Synthesis. It Creates A Global Restructuring Of The Skin Matrix
- Highlight: **Anti Age Acetyl Tetrapeptide-11, Acetyl Tetrapeptide-11 Powder, Acetyl Tetrapeptide-11 Cosmetic Peptide**

Product Description

Anti-Age CAS 928006-88-6 Acetyl Tetrapeptide-11 White To Off-White Powder

Basic Information of Acetyl Tetrapeptide-11 Peptide:

| | |
|-----------------------|---------------------------|
| INCI Name | Acetyl Tetrapeptide-11 |
| Cas No. | 928006-88-6 |
| Recommended use level | 100-1000PPM |
| Appearance | White to off-white powder |
| Purity (HPLC) | ≥95.0% |
| Applications | Anti-age |
| MOQ | 1g |
| Storage | -5 to 8°C |

1. What is Acetyl Tetrapeptide-11 Peptide?

Acetyl Tetrapeptide-11 Peptide is a synthetic peptide that is composed of four amino acids: acetyl proline, proline, tyrosine, and leucine. It is a signaling peptide, which means that it sends signals to cells to perform certain functions.

Acetyl Tetrapeptide-11 is commonly used in skincare products to improve the appearance of aging skin. It can help to reduce wrinkles, fine lines, and crow's feet. Acetyl Tetrapeptide-11 can also help to improve skin tone and texture and to reduce the appearance of pores.

Acetyl Tetrapeptide-11 works by stimulating the production of extracellular matrix proteins, such as collagen and elastin. These proteins are essential for maintaining skin structure and elasticity. Acetyl Tetrapeptide-11 also has anti-inflammatory properties, which can help to reduce skin redness and irritation.

Acetyl Tetrapeptide-11 is generally considered to be safe for most people to use. However, it is important to do a patch test on a small area of skin before using any new skincare product, to make sure that you are not allergic.

In addition to its skincare applications, Acetyl Tetrapeptide-11 is also being researched for other potential applications, such as wound healing, hair loss prevention, and skin cancer prevention. However, more research is needed to confirm these potential benefits.

Overall, Acetyl Tetrapeptide-11 is a promising peptide with a wide range of potential applications. It is a particularly good ingredient for skincare products that are designed to improve the appearance of aging skin.

2. How does Acetyl Tetrapeptide-11 work?

Acetyl Tetrapeptide-11 works by stimulating the production of extracellular matrix proteins, such as collagen and elastin. These proteins are essential for maintaining skin structure and elasticity. Acetyl Tetrapeptide-11 also has anti-inflammatory properties, which can help to reduce skin redness and irritation.

Here is a more detailed explanation of how Acetyl Tetrapeptide-11 works:

Stimulates collagen production: Collagen is a protein that gives skin its structure and elasticity. As we age, our bodies produce less collagen, which can lead to wrinkles, fine lines, and sagging skin. Acetyl Tetrapeptide-11 stimulates collagen production, which can help to reduce the appearance of wrinkles and improve skin elasticity.

Stimulates elastin production: Elastin is another protein that is important for skin elasticity. Acetyl Tetrapeptide-11 stimulates elastin production, which can help to improve skin firmness and reduce the appearance of wrinkles.

Reduces inflammation: Inflammation can lead to redness, irritation, and other skin problems. Acetyl Tetrapeptide-11 has anti-inflammatory properties, which can help to reduce skin redness and irritation.

Overall, Acetyl Tetrapeptide-11 is a promising peptide with a wide range of potential benefits for the skin. It can help to reduce the appearance of wrinkles, improve skin elasticity, and reduce inflammation.

Acetyl Tetrapeptide-11 is generally considered to be safe for most people to use. However, it is important to do a patch test on a small area of skin before using any new skincare product, to make sure that you are not allergic.

3. Applications of Acetyl Tetrapeptide-11

Acetyl Tetrapeptide-11 is a synthetic peptide that is commonly used in skincare products to improve the appearance of aging skin. It can help to reduce wrinkles, fine lines, and crow's feet. Acetyl Tetrapeptide-11 can also help to improve skin tone and texture and to reduce the appearance of pores.

In addition to its skincare applications, Acetyl Tetrapeptide-11 is also being researched for other potential applications, such as: Wound healing

Hair loss prevention
Skin cancer prevention
Acne treatment

However, more research is needed to confirm these potential benefits.

Here are some specific applications of Acetyl Tetrapeptide-11:

Anti-aging skincare products: Acetyl Tetrapeptide-11 is a popular ingredient in anti-aging skincare products, such as serums, creams, and lotions. It can help to reduce the appearance of wrinkles, fine lines, and crow's feet.

Eye cream: Acetyl Tetrapeptide-11 is also a popular ingredient in eye cream. It can help to reduce the appearance of dark circles and puffiness around the eyes.

Scar reduction: Acetyl Tetrapeptide-11 is being researched as a potential treatment for scars. It has been shown to promote collagen production and wound closure in animal studies.

Hair loss prevention: Acetyl Tetrapeptide-11 is also being researched as a potential treatment for hair loss. It has been shown to promote hair growth in animal studies.

Overall, Acetyl Tetrapeptide-11 is a promising peptide with a wide range of potential applications. It is a particularly good ingredient for skincare products that are designed to improve the appearance of aging skin.

Please note that Acetyl Tetrapeptide-11 is not a silver bullet for any of the applications listed above. More research is needed to confirm its long-term efficacy and safety. If you are considering using Acetyl Tetrapeptide-11 for any of these applications, it is important to talk to your doctor or dermatologist first.
